EDUCATION

The University of Texas at Austin - B.S. in Computer Science; GPA: 3.59

May 2027

PROJECTS

FitInNature: Co-developed a data scraping web application to aid marginalized people in experiencing national parks, contributing to front-end design and full-stack development using React, Python, and SQL, supported by continuous integration, unit tests, and extensive documentation.

- Features include search and sorting, pagination, a RESTful API, nearby transportation recommendations, weather checks, user profiles, and saved/bookmarked event lists.

Omnidirectional Transport Robot: Led a team of 3 to design, build, and program an omnidirectional mobile robot as a proof of concept for assistance in warehouses and hospital applications.

- Engineered a chassis that could carry heavy weights, up to 200 pounds, helped build a two-speed transmission system, and also assisted in programming the robot's manual driving program in C.

Pintos: Developed and improved a simple OS framework (implemented the shell, threads, user program support, virtual memory, system calls, and file systems while also addressing synchronization and race conditions using semaphores and locks).

WORK EXPERIENCE

iCode Memorial - Technical Lead

January 2023 - Present

Adapted & instructed 9-month-long courses to classes of ~10 students on topics such as Python, Web Development (JavaScript, HTML/CSS, Databases, Graphic Design, etc.), Scratch, robotics using the VEX IQ platform, and 3D printing. Guided students in developing projects such as functional websites, minigames, simple programs, and maze-solving robots.

- Assisted in streamlining learning resources for other Instructors, giving them more flexibility, and making the learning experience more tailored and effective for students.
- Developed and taught advanced curricula for Java (for app development) and VEX robotics (advanced robotics topics) for advanced and adult classes, with students creating complex mechanisms like double-four bar lifts with limited resources.

Self-Establish Community Robotics Camps

June 2022

Organized two free 4-day summer robotics camps for kids through local community centers, providing accessible STEM opportunities to families who may lack the means of attending a traditional robotics camp.

- Developed and taught 1st- 8th graders coursework on coding, robotics, and engineering concepts using VEX IQ.

ADDITIONAL INFORMATION

Computer Languages: Java, C, C++, Python, JavaScript, HTML/CSS, React, Flask, SQL

Relevant Coursework: Algorithms, Data Structures, Computer Architecture, Operating Systems, Software Engineering, Modern Web Applications

Development Tools: Git, SSH, Linux, Terminal, Visual Studio, Eclipse, IntelliJ, Figma

Work Eligibility: Eligible to work in the US with no restrictions
